

EasyIQ Power Save

- save money and consider the environment at the same time

With EasyIQ Power Save, computers that are not in use are switched off to prevent waste of unnecessary power – an easy way to save power! By installing a service on the computer, the educational institution can define the time span in which EasyIQ Power Save is to be active, and it is also possible to select the computers that need to be switched off.

- Overview of the time span when selected computers may not be switched off.

In practice, EasyIQ Power Save takes starting point in the educational institution's information concerning power consumption and kWh-price. Based on this information, EasyIQ Power Save creates statistics on the computer's power consumption and calculates the total savings. Therefore, it is easy to monitor how much money EasyIQ Power Save cashes in.

EasyIQ Power Save is not only a good investment in the educational institution's environmental considerations, the module also pays for itself over a relatively short period of time.

Interested in EasyIQ Power Save?

[EasyIQ]

Systemtech

EasyIQ is a module-based provisioning platform developed for the educational sector in close co-operation with educational institutions.

EasyIQ contains two basic modules and a number of submodules. In this way, the educational institution only needs to choose the modules that meet its specific needs.

System demands

EasyIQ Basic
 EasyIQ Administration
 2003/2008 AD structure
 (A well-functioning Active Directory is imperative)
 AD user account with local administration rights to the clients
 WMI and ping on the clients must be allowed
