

EasyIQ Batch Creation

Fast creation of users!

EasyIQ Batch Creation makes it a fast and easy job to create temporary users that do not figure in the educational institution's administrative system. Based on the standard profile of the educational institution, it is possible to create user logins with specific rights within a defined period.

- easy creation of temporary users

EasyIQ Batch Creation is particularly valuable in relation to courses or classes where it is necessary to create temporary users. When a course or class is completed, the user logins will become part of the usual clean-up routine in the AD. Subsequently, the temporary users are removed from the system – practical and simple!

Technical information

The administrator chooses a common login name for user logins followed by the choice of number of logins, the time period and the group association. Subsequently, it is possible to generate a number of logins with serial numbers behind the login name. If EasyIQ Print is installed at the educational institution, it is now possible to print out lists with logins and passwords for the selected group.

Systemtech

EasyIQ is a module-based provisioning platform developed for the educational sector in close co-operation with educational institutions.

EasyIQ contains of two basic modules and a number of sub-modules. This way, the educational institution only needs to choose the modules that corresponds to its specific needs.

See a list of the additional modules on the next page.
